GUNHO **PARK**

Cloud Security Engineer · DevSecOps Engineer · Security Researcher

Seoul, Republic of Korea

ian.park3123@gmail.com | gunh0 | gunh0902

"Good code is its own best documentation."

Education

Information Security, Korea University

Seoul, S.Korea

M.S. candidate

Mar. 2021 - Feb. 2023

- Completed all required coursework

HUFS (Hankuk University of Foreign Studies)

Yongin, S.Korea

B.S. in Computer and Electronic Systems Engineering

Mar. 2015 - Feb. 2021

Experience

Hyundai AutoEver

Seoul, S.Korea

Cloud Security Engineer

Dec. 2024 - Present

- Code-based standardization of AWS-native security services across a large multi-account, multi-region environment
  - Security Hub CSPM and GuardDuty as per-account, per-region Terraform modules so newly onboarded accounts inherit the security baseline
  - Extended GuardDuty threat detection coverage across accounts and regions
  - Correlation-based ChatOps alert routing and real-time triage for GuardDuty findings
  - AWS WAF standard policy; block-log analysis drives false-positive rule tuning and exception handling before switching to block mode
- Cloud SIEM/SOAR stack and the detection-to-response operating process
  - Selected the SIEM platform via BAS (Breach and Attack Simulation) with real attack scenarios and verified MITRE ATT&CK-based detection rules
  - Centralized multi-account AWS security logs into a dedicated log archive account for unified SIEM monitoring
  - Lambda and n8n SOAR playbooks that revoke high-risk IAM credentials and isolate instances into a forensic account
  - MCP (Model Context Protocol)-based AI agent environment for security event analysis; multi-agent analysis combining the verdicts of per-log-type agents
  - Intake → triage → owner explanation → remediation process with cross-team R&R
- Security framework for the company's generative AI adoption
  - Reviewed Amazon Bedrock security requirements and designed a generative AI sandbox account architecture
  - Sensitive-data detection pipeline chaining Amazon Macie S3 PII scans with Bedrock Guardrails, codified in Terraform
- Security architecture review and control rollout for new services and projects
  - Reviewed network, logging and threat detection design of AWS projects up front and fed security requirements back
  - Validated and rolled out AWS-native services (SSM, GuardDuty) as replacements for third-party security tooling
  - Security baselines for SaaS/PaaS such as Databricks and for Azure/GCP services, based on the shared responsibility model
- Container and Kubernetes (EKS) security baseline covering cluster access management and container-level logging

Tatum Security

Seoul, S.Korea

Cloud Security Engineer

Aug. 2023 - Dec. 2024 (1y 5m)

- Zero Trust Architecture
  - Research and development of DevSecOps-based cloud security
  - Development of CNCF security project-based solutions using Go
  - Research and development of Zero Trust Segmentation solutions
  - Implemented API visibility and security integration for 'Akamai Guardicore Segmentation' and 'Palo Alto Networks - Prisma Cloud'
- Cloud Security Solutions
  - Developed CIEM solution for multi-cloud permission visibility
  - Implemented CSPM for CNAPP targeting AWS, GCP, Azure, NCP, NHN, and KT
  - Enhanced product capabilities through AWS Security Hub Best Practices implementation
  - Automated security compliance for CIS, NIST, DoD, ISO standards
  - Applied Prowler and Powerpipe for financial security compliance automation
- Infrastructure Security
  - Researched automated vulnerability diagnosis for VMware ESXi, vSphere, and XenServer
  - Built and operated on-premise environments based on vSphere and Proxmox
- Patent
  - Korea, PAT. No. 10-2024-0098442, "Relationship generating device for multiple clouds" (Jul. 2024)

S2W Inc.

Seongnam-si, S.Korea

Security Engineer

Jan. 2022 - Jun. 2023 (1y 6m)

- Gained insights into CTI solutions through cybersecurity data analysis of the dark web
- Implemented on-premise DevOps CI/CD pipeline and GitOps-based service automation
- Developed and maintained Elastic Search-based information gathering system
- Developed Spring Boot based B2G search engine solution backend
- Korea, PAT. No. 10-2022-0189561, Online Threat Data Saving Server and Method (2022.12.29)
- Korea, PAT. No. 10-2022-0190122, Threat Data Search Method for Private Channel (2022.12.30)
- Developed Port Scanner for Attack Surface Management and handled large-scale data processing

Korea University, Hacking and Countermeasure Research Lab

Seoul, S.Korea

Full-time Master's Student Researcher

Feb. 2021 - Dec. 2021 (11m)

- Published in Journal of Cloud Computing (Sep. 2024)
  - Domain knowledge free cloud-IDS with lightweight embedding method
  - Authors: Yongsik Kim, *Gunho Park & Huy Kang Kim
  - DOI: 10.1186/s13677-024-00707-8
- Research Projects
  - NLP-based Cyber Threat Intelligence System Research (Samsung SDS, Mar. 2021 - Dec. 2021)
  - Security and Ultra-High Speed Integrity Technology for Next-Generation In-Vehicle Networks (IITP, Apr. 2021 - Dec. 2021)
  - Next-Generation Security R&D Challenge (IITP, Aug. 2021 - Dec. 2021)
- Patent: PCT/KR2022/017082
  - Lightweight Real-Time Anomaly Detection Method Using CAN Message Analysis and Neural Network Model (Nov. 2022)
- Infrastructure Development
  - Built and operated vulnerability verification and IDS development competition infrastructure for Automotive Grade Linux (AGL) infotainment systems
- Received first semester scholarship in 2021 academic year

LSware Inc.

Seoul, S.Korea

Security Engineer

Jun. 2020 - Dec. 2020 (7m)

- Developed Linux ransomware response and recovery automation systems
- Researched ML-based anomaly detection and anonymous network tracking
- Published at CISC-W'20: "Automated Backup Linux Kernel Module(LKM) Against Ransomware & Classification of Grayscale Images for Encrypted File Detection"
- Published at KSC2020: "A Study on the Malware Classification Using Deep Learning and the Detection of Encrypted Files through the Transformation of Grayscale Images"

LSware Inc.

Seoul, S.Korea

Software Quality Assurance Intern

Mar. 2020 - May 2020 (3m)

- Tested security vulnerability diagnostics and access control systems
- Developed monitoring system and automated consistency check tools
- Implemented test automation scripts and improved methodologies

Extracurricular Activity

WhiteHat School Mentor & Lecturer

Seoul, S.Korea

Korea Internet & Security Agency (KISA) · Virtualization (Container Security) Course

Sep. 2023 - Present

- Next-generation security leader program hosted by the Ministry of Science and ICT
  - Kubernetes cluster setup and operations with kind
  - Docker and Kubernetes security assessment based on CIS Benchmarks
  - ELK-based SIEM design and implementation
- Supervised five student papers presented at KIISC conferences (CISC-S'24, CISC-W'24, CISC-W'25, CISC-W'26)

Microsoft Learn Student Ambassador

S.Korea

Microsoft

2020 - 2022

- Participated in global student developer community program
- Promoted Microsoft technologies and facilitated learning experiences

Naver Whale Browser Extensions

S.Korea

Development Projects

2018

- Popular Movies Extension (TMDB)
  - Developed movie search sidebar extension
  - Rating 4.9/5.0 with 22,083 users and 23,734 downloads (as of Nov. 2024)

Presentation

Conference on Information Security and Cryptography 2020 Winter (CISC-W'20) *Seoul, S.Korea*

Presenter (Korean Paper) *Dec. 2020*

- Automated Backup Linux Kernel Module(LKM) Against Ransomware & Classification of Grayscale Images for Encrypted File Detection

Korea Software Congress (KSC) 2020 *Seoul, S.Korea*

Presenter (Korean Paper) *Dec. 2020*

- A Study on the Malware Classification Using Deep Learning and the Detection of Encrypted Files through the Transformation of Grayscale Images

Korea Software Congress (KSC) 2020 *Seoul, S.Korea*

Presenter (Korean Paper) *Jul. 2020*

- Development of incomplete morpheme connection method for topic analysis of unstructured text data

Conference on Information Security and Cryptography 2020 Summer (CISC-S'20) *Seoul, S.Korea*

Presenter (Korean Paper) *Jul. 2020*

- A Study on the Automated Security Incident Response Using DevOps and Large Log Collection

Conference on Information Security and Cryptography 2019 Winter (CISC-W'19) *Seoul, S.Korea*

Presenter (Korean Paper) *Oct. 2019*

- Trustworthy POS System: Security Requirements Analysis with Threat Modeling

Honors & Awards

Aug. 2023 **Track 2nd Prize**, Junction Asia 2023 in Busan *S.Korea*

Certificates

Aug. 2025 **AWS Certified Cloud Practitioner**, Amazon Web Services (AWS) - Expires Aug. 2028

Dec. 2023 **GitOps Fundamentals Certification**, Codefresh (ID: 657ebbeb96d618d56404423e)
